From the Editor's Desk—

While writing a check the other day, we wondered if we shouldn't publicize the idea that we are happy to pay a commission to any one, collector or fellow dealer, referring a collection or important individual lots to us. We have been paying such fees for several years, with complete satisfaction to all parties concerned. The small mail, or "pocket" dealer in particular, often requires financial and other assistance in handling lots of various U. S. material. We are fully prepared to work with anyone on such transactions at fair terms, simplifying the organization and means to know just what to do, and how to do it.

In the "May-June" issue of "Numisma" we announced that a list of prices realized for the first "Numisma" Mail Bid Sale would appear "in the next issue." We were rather optimistic in our planning, and here, an issue late, is the list of prices realized.

THE QUESTION FORUM

We invite our readers to submit any questions or problems relating to U.S. Early American or Canadian Coins, Medals, Tokens, Literature, etc., including Patterns, Restrikes and similar material. The questions of most general interest will be answered in detail here; others will receive written replies on receipt of a stamped self-addressed envelope.

Ques. On page 203 of S. S. Crosby's "Early Coins of America" he makes reference to "Black Doggs" as money. Have you ever heard of them?

s term? Just what are "Black Doggs?" J. O., Boston, Mass.

Ans. The Crosby quotation that you refer to concerns a vote passed by the Upper House (Colony of Connecticut), May 25, 1721: "An act sent from the Lower House that the coin called black dogs pass at 2^d p^{ce} was dissented to at this board." Looking in the American Journal of Numismatics for 1888, Vol. XXII, p. 96, we find a letter by Crosby going into the subject deeper. In the AJN, Crosby mentions a 1693 marriage (Watertown, Mass.) paid for by "3 black doggs." He further states that the reference in his book was all that his source could discover, the Act referred to not being preserved in the Archives of Connecticut. Crosby explores the matter by discussing various base silver, billon, and white metal communion coins at one time or another called "black money," "black things," etc., one series of which bore a lion rampant, another (a lion) dated 1599, a nondescript animal. He concluded by wondering — "Could the term 'black dog' have been derived from the lion rampant of James VI of Scotland, placed on his coppers, or the rampant lion of Nassau, the device of William III (1688-1702), if that lion ever placed on a coin or tradesman's token; or is the term a corruption of the name of some Continental piece, introduced into circulation here, near the close of the seventeenth century, when almost anything was acceptable as currency?" Since the Crosby reference, of course, refers to a coin specifically, we feel that SSC almost answered his own question. It is our opinion that "black doggs" were other than the long famous "Florida" 1/24th Real tokens struck by Peter (1688). Eric P. Newman, one of the leading authorities on the American Colonial series, concurs in this idea, stating that "the black dogg could be nothing else than the American Colonial token piece as it would be worth somewhere near twopence, is the coin which would turn black while circulating here, and is the coin which has dogs on it, even though the dogs are emaciated." Mr. Newman is the author of a splendid article on the 1/24th Real, which appeared in the July, 1955 "Numismatist."

ques. This may be a stupid question, but what do you mean by RR and RRR? J. L., Mt. Carmel, Ill.

Ans. R = rare, RR = very rare, RRR = extremely rare (say less than a half dozen known to us), RRRR = unique or semi-unique. This abbreviation system has been in use in Europe for at least a century, and in America since about 1858-9, perhaps earlier. As numismatists felt the need of more superlatives, they began to use RRRRR up to seven or eight R's; this led to the idea of using superscripts, algebraic exponents; RR became R², RRR R³, and so forth. An attempt to quantify this sort of thing was made in 1875 in Crosby's "Coins of America," where R⁶ was defined to mean unique or semi-unique, R⁵ perhaps three or four known, R⁴ six or eight known. This attempt stood nearly alone until 1913 when Adams used a ten-point scale of rarity in his book on patterns and experimental coins; this marked the reduction ad absurdum of the whole thing, which was both over-elaborate and sloppily used. By then (perhaps owing to numismatists' protests) the superscript had dropped to lining figures; R⁶ became R6 or R-6. What is probably the final attempt to quantify a scale occurs in Sheldon's "Early American Cents"; this scale is usually being extended to other series. Our use of RR, RRR and RRRR represents a return to the earliest usage for brevity and convenience where quantification ("only seven known to us") is not always possible.

ques. While in your office one day, Mr. Ford positively stated that the term "Proaf" indicates a method of striking or manufacture, not a condition. Other people are equally emphatic that "Praaf" is a condition description. Can you clear this up for me? T. T., Denver.

Ans. The United States Mint has continuously referred to proof coins as a special mintage for collectors. Not all proofs display the surface supposed to characterize them; both regular issues, 1854-16, and some Commemoratives (Hawaii, 50 made; Vancouver; Star, and several others), were made in matte or sandblast finishes. These terms surely refer not to condition but to special methods of manufacture giving the coin a distinctive appearance. It would be fair to say that the people insistent that "Proof" is a condition description have an axe to grind, namely that they have shiny coins, perhaps from the branch mints, which they wish to peddle as "Proofs" at

fantastic, inflated prices. We recall several egregious instances of this sort of thing in recent sale catalogs and ads, particularly in the Morgan Dollar series. On the other hand, consider a coin reported by the Mint as struck only in proof, such as the 1863 quarter eagle 1884 \$20., 1877 3¢ or 5¢. Now a coin of one of these dates might be found in VF or EF condition. It would have to be described as a former proof or impaired proof. If almost perfect, it would still have to be described as such. "Was Proof, now Unc." is meaningless, as the methods of manufacture are different, and the appearance of an Unc. coin also differs from that of an imperfect proof. The question is complicated by the fact that the first few strikings from new dies (particularly in the Canadian series, since the Ottawa Mint began to chrome-plate its dies) superficially resemble proofs. The only path to certainty is through familiarity with the coins. Our insistence on "Proof" as a description of a method of manufacture rather than as a condition description is based on standard Mint practice, which has always been consistent on this point. We might add that several issues are considerably rarer in Unc. than in Proof, precisely because fewer regular business strikes were made (or are now known) than proofs. Among them are the 1884 3¢ nickel (1700 Unc., 3942 Proofs), 1885 3¢ nickel (1000 Unc., 3790 Proofs), 1864 half dime (2 known Unc., 470 Proofs), several trimes between 1867 and 1872, etc., and (so far) the 1895 dollar. The idea that Proof is merely a higher condition grade than Unc. simply does not correspond to fact.

Ques. I have heard that one auction sale around the turn of the century contained over one hundred 1856 Flying Eagle cents. Is this true? And does this have any relation to the hoard of four or five hundred of them mentioned in the Standard Catalogue? *F. S., Havre de Grace, Md.*

Ans. Yes, the Leeds collection, sold Nov. 27, 28, 1906 (Henry Chapman), contained exactly 109 Flying Eagle cents of 1856. And before 1904 G. W. Rice, around that time ANA General Secretary, owned 756 of them—this being the greatest of possibly a half dozen such hoards in the history of American numismatics. His hoard was dispersed, but much of it (probably many of these in turn being Leeds coins) later came into the hands of John A. Beck of Pittsburgh, who ranked next to Virgil Brand and Col. E. H. R. Green as a hoarder. The Beck hoard was gone over during the 1930's by G. H. Clapp and the inventory enumerates exactly 531 1856 Flying Eagle cents. This hoard also is said to contain 114 "slugs" or \$50. ingots, most of them presumably Humberts. The estate has received numerous offers but so far is not interested in dispersing the material, and it is likely to be many years before these coins come on the market.
